ConcreteTech

Technical Trainings Videos

Presented by Gary Mullings

Introducing ConcreteTech, a brand new video training series covering important concrete technical matters, presented by veteran industry technical expert and acclaimed instructor Gary Mullings. Gary is noted for his depth of knowledge and warmth of delivery. Designed to be presented as a part of formal or informal training programs, this series will inform viewers on technical issues and procedures for testing ready mixed concrete.

Quality Assurance Testing Series, Vol. 1

Preparation of 4"x8" Compression Test Specimens

4"x8" compressive strength specimens are allowed by ASTM C31. They are faster and easier to prepare, and result in easier-to-handle eight pound cylinders (compared to 30 lb. cylinders from 6"x12" specimens). And research shows that the 4"x8" specimens produce virtually the same test results.

This information-packed, easy-to-follow 14-minute video, details the steps and procedures that an ACI Grade I Field Testing Technicians (or equivalent) should follow in preparing these specimens in accordance with ASTM C31, including: **Sampling:** Selecting a composite sample in accordance with ASTM C172. **Molding:** Proper molding, including consolidating by rodding or vibrating. **Curing:** Steps for both initial and final curing. **Identifying and Reporting:** recording accurate testing information. ■ Proper preparation of compression testing specimens is a vitally important part of a comprehensive quality assurance testing program. Make sure your field testing technicians have the support they need to produce accurate results. Order this video today.

Available in three convenient formats: DVD, VHS and Computer CD
Members: Was \$35, **Now only \$25** Mon-members: \$140 *Offer good through 12/31/06
